

BORUM ONLINE[®] DIAGNOSTIC

The BM Online[®] Diagnostic is an online platform that allows you to easily get an overview of your Borum machine activity right from your laptop, tablet or phone.

The Borum machine needs to have the BM Master Control installed in order to collect and make the data available online. The Master Control collects the data from the Machine and sends it to the LineMaster computer. Afterwards, this is made available in your own account on our BM Online platform.

Diagnostic data from the Machine is stored on the BM Online platform. So you can always access these data and generate reports by accessing your BM Online account. All data will be stored for minimum 5 years.

You can also opt to receive a notice by SMS or e-mail 20 hours before the next service, or if motor, compressor or hydraulic oil is overheating.

Borum can also access the diagnostic data, which allows us to better understand your needs. Therefore, we can offer improved support, more efficient solutions and improved delivery time.

Advantages:

- Tool for planning service schedules
- View of the condition of the machine to prevent breakdown
- Possibility to receive the best support from Borum
- No loose of Data

SPECIFICATIONS

Communication (Modem type)	GSM 3G (Global System for Mobile Communication 3. Generation)
Satellite navigation system	GPS (Global Position System)
Interface	Web
